

Braga Ranch

SOP: Rodent Control Program

Program will be based on two different procedures for prevention and corrective action. The procedures will involve utilizing bait stations during off peak season and then transitioning to the use of trapping stations during harvest season and operations. The same apparatus will be used for both baiting and trapping.

Bait Stations:

- a) Stations will be placed in potential risk areas
- b) The stations will be located at a minimum distance of 60ft to an adjacent station
- c) The stations will be monitored weekly or as needed, dependant on activity
- d) All monitoring will be documented
- e) Corrective actions will be based on monitoring

Trapping Stations: Once transition has been completed into trapping process of prevention program the following actions will take place:

- a) Traps will be attached to stations where high rodent activity has been documented.
- b) The stations will be monitored weekly or as needed, dependant on activity
- c) All monitoring will be documented
- d) Corrective actions will be based on monitoring
